Settings for importing the IRD configuration	2
Global Parameter Settings	2

Introduction

This document describes how WAY4™ must be configured to comply with MasterCard requirements for changes in operation that become effective from April 2017.

Chapter 1. MasterCard Settings

To comply with MasterCard requirements, WAY4 version 03.43.30.77 or the newer version 03.43.30.XX, if version 03.43.30 is used must be installed at the bank or processing centre. If the bank or processing centre uses WAY4 version 03.44.30, version 03.44.30.10 or higher must be installed.

Settings for importing the IRD configuration

To comply with the payment system's requirements, acquirers who use the configuration provided by the WAY4 vendor must import the standard configuration from MC_IRD_CFG_17_Q2_<Region>_CC.txt files. For information about importing the configuration, see the document "Importing Configurations Using the Configuration Inspector Module".

Before importing the standard configuration, delete the previous configuration. To do so, contact the WAY4 vendor.

Global Parameter Settings

To comply with payment system requirements, the global parameter MC_RELEASE must be assigned the value "17.Q2". The new value must be assigned to the parameter before importing/exporting files pursuant to the new requirements.
