Configuring WAY4™ According to Diners Club Requirements (October 2015)

Contents

Introduction

This document describes how WAY4™ must be configured to conform to Diners Club requirements set forth in documents for Release 15.2.

Chapter 1. Diners Club Configuration Requirements

To conform to Diners Club requirements, WAY version 03.40.30(.00) or the newer version 03.40.30.XX, if version 03.40.30 is used must be installed at the bank or processing centre. If the bank (processing centre) uses WAY4 version 03.41.30, version 03.41.30(.00) or higher must be installed.

Please contact the system vendor for information on the NetServer version necessary for these requirements.

Banks will be notified by the payment system about the date and time the new requirements come into effect.

NetServer Settings

To comply with the requirements of the section "Section 8: Message Data Elements MESSAGE DATA ELEMENT # 62 – ADDITIONAL AUTHORIZATION DATA" of the document "Xpress Transaction Manual Technical Specifications Release 15.2", acquirer banks must add the following parameter to the "INTERNAL_DEFAULTS" section of the Diners Club channel configuration file:

```
<MODULE TYPE="INTERNAL_DEFAULTS">
<PARAMETER NAME="FIELD 1.3" VALUE="15.1" COMMENT="DINERS Release"/>
</MODULE>
```

After changing the "FIELD 1.3" parameter value, restart the channel.

Configuring POS Terminals

Pursuant to the section "MESSAGE DATA ELEMENT # 43 - CARD ACCEPTOR NAME/LOCATION" of the document "Xpress Transaction Manual Technical Specifications. Release 15.2" ("Release 15.2 Xpress Transaction Manual (04.17.2015).pdf") acquirer banks should check POS terminal settings to ensure they meet the following requirements:

- The Name, City, and Country Code fields must be filled in to transmit this data in transaction messages.

- Only uppercase and lowercase Latin letters and digits from "0" to "9" can be used to fill in these fields.

Configuring Global Parameters

To meet payment system requirements, the value of the global parameter DCI_RELEASE must be set to "15.2". The new value must be assigned to the parameter before importing/exporting files pursuant to the new requirements.
